

Hi there,
I wanted to take a minute to let you know about a program we offer our customers to help with their medication adherence. At Green Life Pharmacy, we are always focused on helping our patients be as healthy as possible. That's why we offer our Medication Synchronization program.

Synchronization Program:

Medication Synchronization is an automated medication synchronization solution that coordinates a patient's prescriptions to be filled on the same day each month. As part of this program we have created additional time for patient consultations; used for educating, coaching, and reinforcing desired behaviors of patients to improve adherence.

What is Medication Adherence?

Medication adherence is defined as a patient's conformance with their provider's recommendation with respect to timing, dosage, and frequency of medication-taking during the prescribed length of time.

In other words, are they taking the medications they are prescribed on time, in the correct dose and for the prescribed amount of time?

Benefits:

- Each month, on the day of your patients' choosing, all of their prescriptions will be refilled and ready for pick up or delivery.
- A few days prior to their prescriptions getting refilled, they will receive a call from our pharmacy to confirm which prescriptions are needed.
- We ensure they are taking the right medications each month by checking with them and you, to eliminate any confusion with their medication regimen.

It's Easy. It's Convenient. It's Free.

If you or your patients would like to know more information about this program, please don't hesitate contact us.

Sincerely,
Green Life Pharmacy Staff
